

# Nocweed® Technical Information

**NOCWEED® is a selective herbicide for the control of a wide variety of broad-leaved weeds in managed amenity turf. Contains 252g/litre MCPA, 42g/litre mecroprop-p and 18g/litre dicamba.**

The formulation is very safe on all turf species, even as young as the two-three leaf stage. This is due to the combination and rates of the active ingredients.

NOCWEED® has a broad spectrum of activity against weeds such as Daisy, Ribwort Plantain, White Clover, Creeping Buttercup, Groundsel and Yarrow.

## Application

NOCWEED® is applied at 5l/ha in volumes of 200-600 litres of water per hectare. NOCWEED® should be applied as a medium quality spray (BCPC category).

NOCWEED® may be applied as a tank-mix with a range of products. Contact Bayer Environmental Science for compatibility information on specific tank-mixes. Full manufacturer's instructions must be followed for each tank-mix component.

### PROTECT FROM FROST

SHAKE OR ROCK THE CONTAINER BEFORE USE

READ ALL PRECAUTIONS BEFORE USE. (MAPP 10609)

PACK COVERAGE: 5 LITRES COVERS 1 HECTARE (10,000m<sup>2</sup>)

Nocweed is a registered trademark of Bayer CropScience Limited.
